

SuspendedState::resume

ReadyState::start

OperationalState::getInstance

```
graph LR; A[SuspendedState::resume] --> C[OperationalState::getInstance]; B[ReadyState::start] --> C;
```

The diagram illustrates a dependency or flow where two methods, `SuspendedState::resume` and `ReadyState::start`, both point to a single target method, `OperationalState::getInstance`. The source methods are in white boxes, and the target method is in a gray box. Blue arrows indicate the direction of the flow from left to right.
